SUMMARY

Back-end developer focused on the Java ecosystem (Spring Boot and Quarkus) and C# .NET, in my final semester of Systems Analysis and Development. Hands-on experience building complete REST APIs in academic and personal projects: data modeling with JPA/Hibernate, layered architecture, exception handling, and proper HTTP status practices. Currently deepening my knowledge of Spring Security, PostgreSQL, and Docker in a personal project. Looking for a junior back-end developer or trainee position.

TECHNICAL SKILLS

Languages	Java, C#, SQL
Back-end	Spring Boot, Spring Data JPA, Quarkus, .NET
Persistence	JPA / Hibernate, PostgreSQL, H2
Architecture	RESTful APIs, layered architecture (Controller / Service / Repository), Clean Architecture
Tools	Docker, Docker Compose, Flyway, Maven, JUnit
Version Control	Git, GitHub, GitFlow
Methodologies	Scrum
Additional	React, TypeScript, Python
Languages (spoken)	Portuguese (native), English (advanced)

PROJECTS

Farmalog — Personal project · in progress

Java 21 · Spring Boot · Spring Data JPA · PostgreSQL · Flyway · Docker · JUnit

github.com/ggabmartins/farmalog-api

- REST API for inventory management in independent pharmacies, with batch control and expiration tracking. PostgreSQL running in a Docker container, schema versioned with Flyway, and credentials externalized via environment variables.
- DTOs decoupled from entities, Bean Validation, dynamic filtering with Specification, and centralized error handling using the ProblemDetail format (RFC 7807).
- Unit and integration tests from the first delivery. In progress: JWT authentication with Spring Security and role-based authorization.

ClyvoCare — FIAP Challenge · team project

Java 23 · Spring Boot · Spring Data JPA · Oracle · Flyway · Spring Security (JWT/RSA) · Docker · Azure

github.com/ClyvoPet-Challenge-2026/Java-Sprint-1

- Pet health plan API, split by bounded context with a sibling API in C# .NET, sharing the same Oracle database under a write contract the team defined before implementation.
- Responsible for migrating the schema to Flyway with a baseline over an already-populated Oracle database, and for the authentication core: JWT signed with an RSA key pair, password hashing, and role-based authorization (ADMIN/OWNER) on every route.
- Deployed in a Docker container on Azure, with an automated infrastructure provisioning script.

FlowHome — FIAP Global Solution

Java · Quarkus · REST API · React · TypeScript · Git Flow

API: github.com/ggabmartins/flowhome-gs | Front-end: github.com/orlando-IDA/flowhome-gs

- Hybrid work organization system, with task management by category and a team productivity dashboard.
- Developed the REST API in Java Quarkus, including the aggregation endpoints that power the dashboard. Delivered as a team project, with full integration between API and front-end.

EDUCATION

Systems Analysis and Development — FIAP

São Paulo, Brazil · Final semester (4th) · February 2025 – December 2026
